

The Faculty of Science and Technology, university of Stavanger invites students from Institute Technology Bandung in Indonesia to apply on to the study programme **Master in Environmental Technology - (120 ECTS)** and **Master in Offshore Technology (120 ECTS)**

The programmes are of two year duration, starting from mid August. Accepted students will enjoy the benefit of a living stipend in Norway within the Norwegian Quota Programme.

### **FINANCING OF STUDIES - THE QUOTA PROGRAMME**

The Quota Scholarship is provided by the Norwegian government, handled by the Norwegian Students Loan Fund and the Norwegian Universities.

One of the objectives of this programme is to offer students from some defined countries to acquire competences in research areas and in certain professions. The Quota Scholarships starts out as a student loan from the Norwegian Students Loan Fund, and when the student returns home after completed studies, his/her loan will be repaid by the Ministry of Foreign Affairs as a part of the financial aid offered to these defined countries. The financial support will only be turned into a scholarship upon return to the students' country of origin.

The yearly amount covered by the Norwegian Students Loan Fund is sufficient to cover all regular fees, books and all living expenses for the academic year (10 months). Some travel aid is also included.

If residence is taken in Norway within ten years after termination of studies, the scholarship will be converted back to a loan, and must be repaid by the student. We deem it also necessary to inform that former foreign students will normally not be allowed a re-entry for working in Norway until they have spent five years in their home country.

### **APPLICATION PROCEDURES AND REQUIREMENTS**

The programme is further based on the institutional cooperation agreement between University of Stavanger, Faculty of Science and Technology, and Institute Technology Bandung.

Students must apply to the study programmes in **Master in Environmental Technology** - and **Master in Offshore Technology** in order to receive a quota scholarship . The application form, admission requirements can be found on [www.uis.no](http://www.uis.no) . Only students with a completed BA in engineering , please read the specific requirements for each master program on the [www.uis.no](http://www.uis.no) website. A certain level of English language is required. This must formally be documented and submitted with the application, in addition to educational certificates formally translated into English.

For each year there are a few scholarships available for each program for students from Institute Technology Bandung.

The University of Stavanger, will send Letter of Admission to the candidates found qualified, including information of the continuing procedures, how to proceed for residence permit, dormitory and other practical things.

### **ARRIVAL IN STAVANGER**

Accepted students must do all the practical preparations necessary for the travelling and staying in Norway.

The arrival for new international students to the University of Stavanger must be before Monday the 8<sup>th</sup> of August. All new international students are required to attend Orientation Week that will last from Monday 8<sup>th</sup> to Sunday 14<sup>th</sup> August 2011.

The students accepted on to the Quota Programme must count on some time before they will receive their scholarship in Norway. They should therefore have to count on some self financing funds for the first weeks for their stay in Norway. The imposed duties from University and housing can be postponed in anticipation of the scholarship from the Students Loan Found.

There are no extra tuition fees to be paid for studying in Norway, except from a semester fee of NOK 750,- per semester.
